

Ellis Intellitrol Industrial Dryer Control

Historically,
industrial laundries
are labor-intensive,
high-stress operations.

Custom Control Systems

has changed that.

INTELLITROL FEATURES

Easy to use - Intellitrol puts all of the dryer information displays and control buttons on one panel.

Easy to automate - Automation software is included with every control, meaning no per-machine charge to upgrade your laundry to an automated system.

Easy to program - WashComm software takes the pain out of programming dryer formulas.

Easy to maintain - Intellitrol counts the dryer's hours of operation and alerts plant engineers when machine maintenance items are due.

Easy to network - Every Intellitrol is network-ready, so your dryers will be prepared when it's time to add reporting.

Easy to read - Concise status displays and bright LED indicators clearly show you what the machine is doing.

Use a **custom step name**, or choose from our list of 24.

Formula number and step number are **always on the display** while the dryer is running.

Check the **actual or programmed** inlet and outlet temperatures.

The **outlet humidity** of the dryer is always available here.

The **time display** can show you formula elapsed time, step time remaining, formula time remaining, and step time programmed.

Current dryer status appears down here. Any errors that occur appear here, too.

Control status LEDs indicate operating mode, **formula timer status** and communication activity.

Formula **programming keys** speed control programming.

Large **time, temperature and level** displays show you what's going on - even from a distance.

Function-specific buttons for dryer functions also feature indicators to show dryer status.

WashComm Control Programming Software

Do away with complex programming. WashComm applies easy-to-learn Microsoft Windows software to provide easy access to formulas and control settings.

- Set up and edit dry formulas from any portable or desktop computer using Windows.
- Connect the WashComm cable to a laptop and the dryer; then download to program the control.
- Store as many dryers as needed in a single file.
- Create another file for dryers from another plant.
