

Ellis Intellitrol Industrial Washer Control

Historically,
industrial laundries
are labor-intensive,
high-stress operations.

Custom Control Systems

has changed that.

INTELLITROL FEATURES

Easy to use - Intellitrol puts all of the washer information displays and control buttons on one panel.

Easy to automate - Automation software is included with every control, meaning no per-machine charge to upgrade your laundry to an automated system.

Easy to program - WashComm software takes the pain out of programming wash formulas and setting up chemicals.

Easy to maintain - Intellitrol counts the washer's hours of operation and alerts plant engineers when machine maintenance items are due.

Easy to network - Every Intellitrol is network-ready, so your washers will be prepared when it's time to add reporting.

Easy to read - Concise status displays and bright LED indicators clearly show you what the machine is doing.

Use a **custom step name**, or choose from our list of 96.

The **current speed** of the washer is always available here.

Check the **actual or programmed** water level and temperature.

The **time display** can show you formula elapsed time, step time remaining, formula time remaining, and step time programmed.

Formula number and step number are **always on the display** while the washer is running.

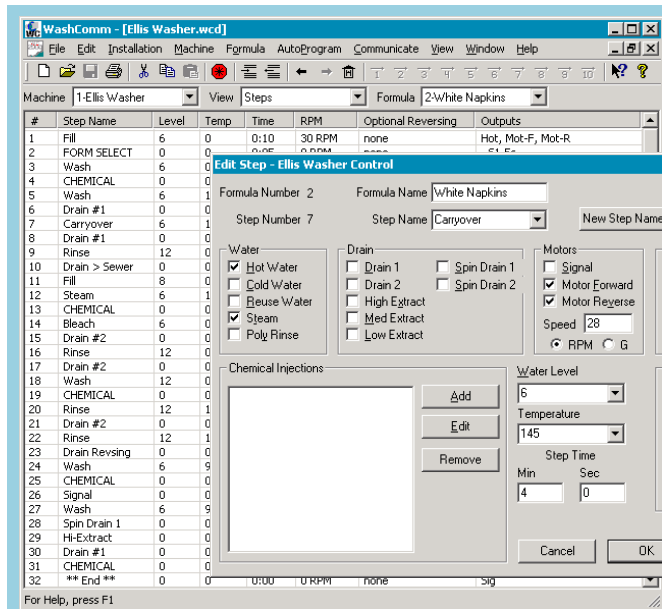

Current washer status appears down here. Any errors that occur appear here, too.

Large **time, temperature and level** displays show you what's going on - even from a distance.

Control status LEDs indicate operating mode, **formula timer status** and communication activity.

Function-specific buttons for washer functions also feature indicators to show washer status.

Formula **programming keys** speed control programming.

WashComm Control Programming Software

Do away with complex programming. WashComm applies easy-to-learn Microsoft Windows software to provide easy access to formulas and control settings.

- Set up and edit wash formulas from any portable or desktop computer using Windows.
- Connect the WashComm cable to a laptop and the washer; then download to program the controls.
- Store as many washers as needed in a single file.
- Create another file for washers from another plant.
